## Unnamed tributary

co-0729-r-006

Sedimentation Risk Index  
**42**

Common: 3.2mi NW of Laurel Hill  
Drainage: Big Creek  
Land owner: Dwight Steele

GPS: 30.997012, -86.499121

County: Covington  
PLSS (T-R-S): 6N-23W-24  
Parcel No.: 2  
Road Name: Steele Rd

Crossing Structure: US

US

## Unnamed tributary

co-0831-r-015

Sedimentation Risk Index  
**42**

Common: 6.8mi SW of Opp  
Drainage: Mulberry Creek GPS: 31.198640, -86.315943  
Land owner: Chester & Connie Harper-DS, Navajo Bawkum –US  
West, Mary Nawlin –US East

County: Covington  
PLSS (T-R-S): 3N-17E-26  
Parcel No.: 6; 1; 7.01  
Road Name: Crosby Clark Rd

Crossing Structure: US

US

# Taylor Mill Creek

co-0904-r-016

Sedimentation Risk Index  
**44**

Common: 6.8mi SE of Andalusia  
Drainage: Yellow River      GPS: 31.278513547, -86.372965993  
Land owner: C&R Wratchford -US, J&R Pate LE -DS

County: Covington  
PLSS (T-R-S): 4N-17E-29/32  
Parcel No.: 16; 5  
Road Name: Ellis Griggs Rd

Crossing Structure: DS

DS

## Additional Site Features

Crossing Type and Quantity: Culvert, 1  
Crossing Materials: Metal  
Soil Types: 6,13,60  
Rt Approach Prism Fill: 0.1in  
Lt Approach Prism Fill: 0.1in

Notes: Dry at time of survey. Dead minnows in DS puddle.

# Mulberry Creek

co-0831-r-006

Sedimentation Risk Index  
**46**

Common: 6.4mi SW of Opp  
Drainage: Indian Creek GPS: 31.199322, -86.303517  
Land owner: Rayonier Forest Resources LP

County: Covington  
PLSS (T-R-S): 3N-17E-25  
Parcel No.: 1  
Road Name: Tweedle Bell Rd

Crossing Structure: DS

DS

# Good Springs Creek

co-1102-r-004

Sedimentation Risk Index  
**46**

Common: 2.1mi S of Five Points  
Drainage: Poley Creek GPS: 31.410927205,-86.301856745  
Land owner: Charles & Stacy Hinds

County: Covington  
PLSS (T-R-S): 5N-17E-12  
Parcel No.: ?  
Road Name: Chaker Rd

Crossing Structure: DS

DS

# Burnt Grocery Creek

sr-0223-r-001

Sedimentation Risk Index  
**48**

Common: 3mi SE of Harold  
Drainage: Yellow River  
Land owner: The Nature Conservancy

GPS: 30.626983, -86.846339

County: Santa Rosa  
PLSS(T-R-S): 2N-26-33  
Parcel No.: 1  
Road Name: Fisher Old Mill Rd

State: Florida

Crossing Structure: US

DS

## Additional Site Features

Crossing Type and Quantity: Bridge,1  
Crossing Materials: Wood  
Soil Types: 3,13,14,15,31,32,61  
Rt Approach Prism Fill: 0.5in  
Lt Approach Prism Fill: 0.75in

| Feature            | Within Range | Descriptive Field  |
|--------------------|--------------|--|
| 303(d)             | No           | N/A  |
| Wetland Species    | No           | N/A  |
| Rare and Imperiled | No           | N/A  |
| Land Use/ Cover    | Yes          | PARCELS WITH NO VALUES/<br>MDC - LOW DENSITY, FIXED SINGLE<br>FAMILY UNITS |
| Candidate Mussels  | No           | N/A  |
| Sturgeon C.H.      | No           | N/A  |

Notes: Farm along both approaches.

**DRIPTING ROCK STABILIZATION  
PROJECT  
RESTORATION PLAN  
SCOPE OF WORK**

**YELLOW RIVER  
COVINGTON COUNTY, ALABAMA  
JUNE 2011**

**COOPERATING ENTITIES:**

**THE NATURE CONSERVANCY**

**FLORIDA FISH AND WILDLIFE CONSERVATION  
COMMISSION**

**PRIVATE LANDOWNERS**

**PROJECT PROPOSAL**

The U.S. Fish and Wildlife Service (USFWS), in cooperation with The Nature Conservancy (TNC), the Florida Fish and Wildlife Conservation Commission (FWCC), U.S. Department of Defense (DoD), and private landowners propose to restore the Dripping Rock site on the Yellow River, Covington County, Alabama by reshaping streambank habitat, planting native vegetation, installing permanent gates, and re-contour floodplain terrace to reduce and eliminate sedimentation. The USFWS, along with FWCC, TNC, DoD, and the private landowners will be funding components of this

project to benefit threatened Gulf sturgeon spawning habitat, migratory fish species, and restore floodplain wetland plant communities.

## **BACKGROUND**

Habitat degradation is a primary factor in the decline of biodiversity in aquatic ecosystems in the southeastern U.S. Riverine and riparian restoration are often necessary to conserve and restore natural function, connectivity, and biodiversity of rivers affected by habitat degradation. The Yellow River (Pensacola Bay Drainage) is a large, blackwater river which flows through forested and agricultural lands in Alabama and Florida. While the Yellow River is noted for relatively high fish and mollusk biodiversity, its watershed is currently being impacted by a variety of nonpoint sources of pollution, notably sedimentation resulting from river bank instability. This excessive sedimentation causes habitat smothering, loss of in-stream habitat, and ultimately large-scale degradation of river ecology and function.

The Gulf sturgeon (*Acipenser oxyrinchus desotoi*) is a federally threatened species indigenous to Gulf of Mexico river drainages, including the Yellow River. The Yellow River, downstream from Alabama State Highway 55, is designated as critical habitat for Gulf sturgeon. The USFWS identified five potential spawning sites on the Yellow River that possess the features – limestone outcroppings, cobble, and gravel – which are essential for successful sturgeon spawning. The “Dripping Rock” site was identified as having the best potential spawning habitat of the five sites and was the only one from which sturgeon eggs have been documented (Figures 1, 2, and 3).

However, this location has substantial public use along its banks adjacent to this spawning area. This has resulted in denuded river banks which are known to slough substantial amounts of sediment to the Gulf sturgeon spawning area during rain events and high river flow periods. This has resulted in reduced water quality and significant bank erosion (Figure 4) at this site, and is believed to smother and otherwise degrade the natural bedrock and gravel spawning substrate needed by Gulf sturgeon for population recovery in this river. The USFWS Gulf Sturgeon Recovery/Management Plan (1995) identifies habitat degradation, including degradation and loss of spawning habitat, as a significant contributor to the decline of this species and responsible for its listing under the Endangered Species Act. The plan also recommends habitat restoration to reduce these impacts for long-term recovery of Gulf sturgeon populations in affected systems.

## **PROBLEM**

This location, known locally as “Dripping Rock”, is located on the western bank of the Yellow River approximately two miles downriver of Alabama State Highway 55, in Covington County, AL (FDEP 2002). Dripping Rock is characterized by a denuded riverbank and an unpaved road which terminates at the site and is directly adjacent to one of five potential Gulf sturgeon spawning sites and is the only site from which sturgeon eggs have been documented in the Yellow River (USFWS 2001). The “Dripping Rock”

site also has substantial public use along its banks adjacent to this spawning area. This site is accessed by the unpaved road, in which persons trespass over private property to reach the river, and vandalism is common. Destruction of the riverbank by trespassers apparently facilitates large amounts of sediment from the unpaved road to enter the river and is believed to smother and otherwise degrade the natural bedrock and gravel spawning substrate needed by Gulf sturgeon in the Yellow River (FDEP 2002).

The “Dripping Rock” locality was assessed during Phase 1 of the “Inventory and Prioritization of Impaired Sites in the Yellow River Watershed in Florida” (FWC Agreement Number 08232). This location (site number co-0610-001) was identified as an area of substantial impairment that affected several biological and habitat resources in the Yellow River, including Gulf sturgeon as described above. Because the limestone hard-bottom which characterizes this site is rare in the basin, the USFWS also believe that this is a potential locality for at least one of the five mussels which are currently candidates for protection under the Endangered Species Act. Although located in Alabama, the factors degrading this site (e.g., sedimentation for an unpaved road) directly affect the quality of softwater streams in Florida located directly downriver from the site and biological resources of Florida freshwaters such as the Gulf sturgeon and species designated as Species of Greatest Conservation Need such as Alabama shad (*Alosa alabamae*), which are similarly affected by this habitat degradation (FWC 2005). Sedimentation originating from the unpaved road and denuded riverbank is considered a “High ranking Sources of Stress” to softwater streams, categorized under the heading “roads” in the CWCS (FWC 2005). The State of Florida has previously identified this location as impacting Florida resources and recommend restoration at this site (FDEP 2002). In addition, the State of Florida has identified this drainage in both Alabama and Florida as an important conservation unit for Gulf sturgeon and recommend habitat restoration for long-term recovery and conservation of its stocks (Wakeford 2001). The cost of restoring this site is relatively low in comparison to similar river restoration actions. In total, restoration of the “Dripping Rock” will directly improve several high-priority Florida habitat and biological resources at a relatively low cost.

## **RESTORATION PLAN DESCRIPTION AND BUDGET**

We will restore the riverbank as well as the unpaved road leading to the riverbank at Dripping Rock using standard river corridor restoration techniques which have been employed successfully elsewhere in the Yellow River and nearby river drainages (NRCS 2001, USFWS 2005). Generally, we will fill, grade, stabilize, and revegetate the road and river corridor at the site. In addition, we will install a main enclosure gate and a secondary gate to prevent illegal trespassing at the site and ensure long-term stabilization and recovery.

We propose the physical modification of the unpaved road, right floodplain, and streambank on the Yellow River at the Dripping Rock Site (see Appendix 1 for Engineering Design). This includes constructing a contoured terrace within the floodplain and streambank to stabilize slope habitat and plant with native vegetation. Specifically, we propose to (1) stabilize the length of the impacted streambank and

floodplain using natural fiber erosion control cloth, (2) provide native shrub and tree material planting along the stream corridor for future stabilization and habitat recovery, (3) seed all exposed areas with annual and perennial plants, and (4) install heavy duty gate at main entrance and secondary gate mid-way to minimize vehicular traffic. An itemized list with total quantities needed for the restoration is located in Table 1, including erosion control fabric for short-term sediment/bank stabilization; stakes for setting the erosion control fabric; trees, shrubs, herbaceous plants, and temporary seed for revegetation and long-term sediment/bank stabilization, and fill dirt for assuring necessary grade; and substrate for long-term revegetation and site stabilization. All plantings and material for this project will follow guidelines outlined and recommended in Appendix 2.

Table1. Itemized list of materials and cost needed for the Dripping Rock Site, Yellow River, AL.

| Item   | Quantity  | Unit Price | Total Cost   |
|--|-----------|------------|--------------|
| Main Gate-4" steel tube gates(installed)                       | 2         | 1550.00    | 3100.00      |
| 4" steel post road barricade(installed)                        | 15        | 250.00     | 3750.00      |
| Secondary Gate   | 2         | 425.00     | 850.00       |
| Seeding (browntop, lime fertilizer, Bahia, mulch and planting) | 2 acres   | 1650.00    | 3300.00      |
| Fill Dirt  | 300 cuYDS | 7.00       | 2100.00      |
| Topsoil  | 50 cuYDS  | 10.00      | 500.00       |
| Mobilization and Demobilization                                | job       | 1500.00    | 1500.00      |
| Tree Planting  | 175       | 7.00       | 1225.00      |
| Shaping, filling and Smoothing (berm and flood plain)          | Job       | 3600.00    | 3600.00      |
| Total  |           |            | \$ 19,925.00 |

## PROJECT OBJECTIVES

The objectives of this project are to (1) reshape the right streambank at the Yellow River to create a stable slope and minimize sedimentation, (2) replant riparian vegetation to restore the natural floodplain ecosystem along the Yellow River, (3) isolate the reach from degradation caused by vehicles, and (4) provide stream corridor habitat necessary for long-term (+10 years) recovery of the natural riparian vegetation community of this stream system.

## **EXPECTED BENEFITS**

Benefits of restoring Dripping Rock Site include: (1) recovery of in-stream habitat for spawning Gulf sturgeon; (2) recovery of native aquatic biota typical to Yellow River stream ecosystems, such as flow-dependent fish and macroinvertebrate species; (3) restoration of natural in-stream water quality and sediment dynamics, which influence the aquatic preserve as described above; (4) increased resilience of aquatic species' populations to population fluctuations; (5) restoration of stream corridor habitat for long-term recovery of the natural riparian vegetation community of this stream system; (6) aesthetic improvement of habitat from degraded to recovered condition; and (7) improvement to condition and management of public resources.

## **SCHEDULE**

We will restore the riverbank as well as the unpaved road leading to the riverbank at "Dripping Rock" from June – July 2011.

## **CONTACTS**

For further information contact Chris Metcalf, FWS (850) 769-0552 x224 or Steve Herrington, TNC (850) 381-1147.

## **Appendix 2**

### **Plant Material and Erosion Control Recommendations for Restoration of Coastal Plain Streams**

Chris Metcalf  
U.S. Fish and Wildlife Service  
Panama City Fisheries Office  
Partners for Fish and Wildlife Program  
Panama City, FL 32405  
850/769-0552

The U.S. Fish and Wildlife Service, through the Partners for Fish and Wildlife Program, is actively conducting stream restoration projects within the Northeast Gulf Ecosystem portions of Florida, Alabama and Georgia. As part of the restoration process, plant materials and erosion control is needed to provide stabilization of streambanks and floodplain areas. We recommend using the following materials for restoration. For best plant material recommendations, identify existing plant species at reference locations.

#### **Herbaceous Seed Material:**

Temporary and permanent seed should be broadcast on all exposed soils upon completion of each project. The following seed mixes are recommended to use at various zones along the streambank, riparian and upland areas. On average, about 10 lbs/acre should be applied on bare soil.

#### **Wet Condition Seed Mix (apply to streambank)**

Virginia Wild Rye – 20%  
Big Bluestem – 20%  
Eastern Gama Grass – 30%  
Switch Grass – 10%  
Partridge Pea – 20%  
Redtop grass (*Agrostis stolonifera*) can also be used in addition to the above seed mix.

#### **Semi Dry Conditions Seed Mix (apply to upper streambanks and floodplain areas)**

Big Bluestem – 20%  
Little Bluestem – 15%  
Blackeyed Susan – 15%  
Indian Grass – 20%  
Virginia Wild Rye – 10%  
Switch Grass – 5%  
Showy Partridge Pea – 5%

### **Dry Conditions Mix (apply to upland/dry areas)**

A combination of these seeds should add up to 100%. These species can also be added into the Semi-Dry mix. Florida ecotype seed is preferred.

Bitter panicgrass (*Panicum amarum*)  
Needleleaf witchgrass (*Dichanthelium aciculare*)  
Black-eyed susan (*Rudbeckia hirta*)  
Common trumpetcreeper (*Campsis radicans*)  
American beautyberry (*Callicarpa americana*)  
Shortspike Bluestem (*Andropogon brachystachyus*)  
Wiregrass (*Aristida spp*)  
Coastal Plain Chaffhead (*Carphephorus corymbosus*)  
Toothachegrass (*Ctenium aromaticum*)  
Tall Elephantsfoot (*Elephantopus spp.*)  
Pinebarren Goldenrod (*Solidago fistulosa*)  
Garber's Blazing Star (*Liatris garberi*)  
Narrowleaf Silkggrass (*Pityopsis graminifolia*)  
Yelloweyed Grass (*Xyris spp*)

All exposed soils should be temporally treated with an annual grass or plant that will germinate quickly for immediate stabilization. During the winter months, annual grains (rye, oats, or wheat) and/or annual rye grass should be planted. In summer, sorghum or brown top millet should be planted. Rates of planting for temporary stabilization should be at about 5-10 lbs/acre. Native St. Augustine can also be sprigged or sodded along streamsides for critical stabilization. Additionally, mycorrhizae should be added to soil for revegetation success.

### Woody Plant Material:

Permanent tree and shrubs should be planted upon completion of each project. Plant materials can be constructed as fascines, live stakes and/or whole live trees/shrubs. Planting should occur along all exposed streambanks and floodplain areas. The following plants are recommended for various planting methods.

#### *Fascines Plants*

The following plants are recommended to construct live fascines. All fascines should be harvested during the winter/dormant months and planted along the streambank where ground water will be exposed to bark. Fascines should range between 4' to 6' long and planted parallel to the bank at 2 foot spacing.

Buttonbush (*Cephalanthus occidentalis*)

Swamp dogwood (*Cornus foemina*)

Silky dogwood (*C. amomum*)

Sandbar willow (*Salix exigua*)

Black willow (*Salix nigra*)

#### *Live stakes*

The following plants are recommended to make live stakes. All live stakes should be harvested during the winter/dormant months and planted along the streambank where ground water will be exposed to bark. Live stakes should range between 12" to 48" long and planted at a spacing of 2 feet (Figures 1 and 2).

River birch (*Betula nigra*)

Buttonbush (*Cephalanthus occidentalis*)

Swamp dogwood (*Cornus foemina*)

Silky dogwood (*C. amomum*)

Tulip (yellow) polar (*Liriodendron tulipifera*)

Sycamore (*Platanus occidentalis*)

Carolina willow (*Salix caroliniana*)

Sandbar willow (*Salix exigua*)

Black willow (*Salix nigra*)

Elderberry (*Sambucus Canadensis*)

#### *Shrubs*

The following shrubs are recommended for planting. All shrub materials should be planted during the winter/dormant months and planted along the streambank and throughout the floodplain areas. Shrubs should be planted at a spacing rate of 18" to 36".

River locust [Indigo-Bush] (*Amorpha fruticosa*)

Wax myrtle (*Myrica cerifera*)

Sweet pepper bush (*Clethra alnifolia*)

Hazel alder (*Alnus rugosa* [*syn. Alnus serrulata*])

Swamp dogwood (*Cornus foemina*)

Silky dogwood (*C. amomum*)

Buttonbush (*Cephalanthus occidentalis*)

Carolina willow (*Salix caroliniana*)

Virginia willow (*Itea virginica*)

Titi (*Cyrellea racemiflora*)

Southern bayberry or Wax myrtle (*Myrica cerifera*)

### Riparian Trees

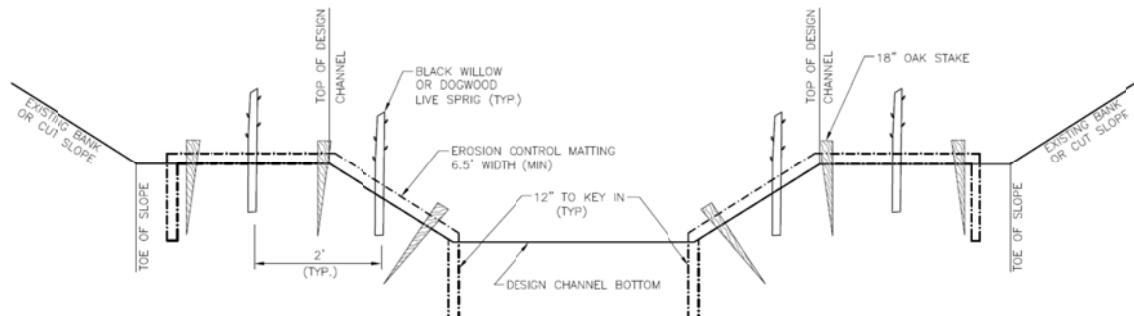

The following trees are recommended for planting. All trees should be planted during the winter/dormant months and planted along streambank and throughout the floodplain areas. Trees should be planted at a spacing rate of 12' to 16'.

Baldcypress (*Taxodium distichum*)  
Green ash (*Fraxinus pennsylvanica*)  
Swamp laurel oak (*Quercus laurifolia*)  
Overcup oak (*Quercus lyrata*)  
Swamp chestnut oak (*Quercus michauxii*)  
Water oak (*Quercus nigra*)  
Tulip (yellow) polar (*Liriodendron tulipifera*)  
American sycamore (*Platanus occidentalis*)  
Water tupelo (*Nyssa aquatica*)  
Blackgum (*Nyssa sylvatica*)  
Ogeechee tupelo (*Nyssa ogeche*)  
Needle palm (*Sabal palmetto*)  
Dogwood tree (*Cornus florida*)  
American beech (*Fagus grandifolia*)  
Red maple (*Acer rubra*)  
River birch (*Betula nigra*)  
Atlantic white cedar (*Chamaecyparis thyoides*)  
Sweet bay (*Magnolia virginiana*)

### Erosion Control Fabric:

Coir fiber blankets should be placed on all exposed streambank soils and anchored with either live or wooden (minimum length 18") stakes every 4 feet (Figures 1 and 2).

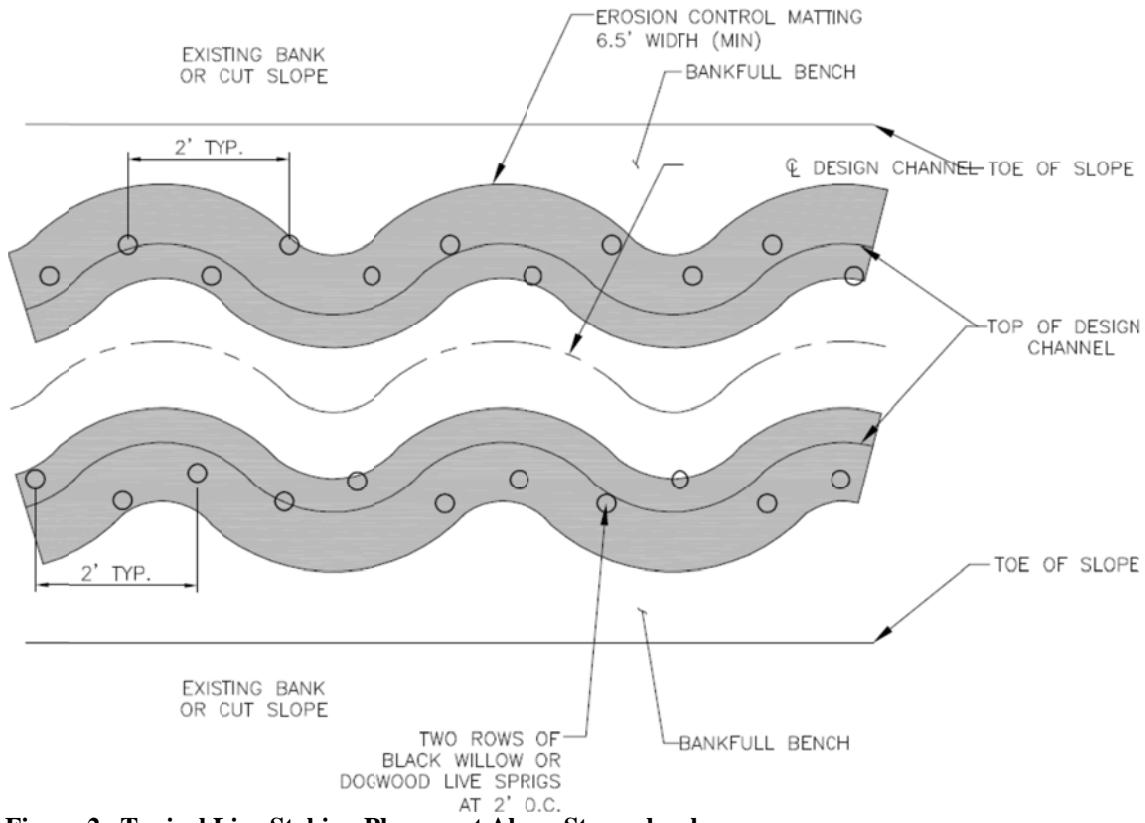

Blankets should be woven with a minimum weight of 700 grams/square meter. Along exposed upper slopes and floodplain areas, blown hay and wooden fiber blanket (i.e., excelsior) should be installed and securely fastened with either wooden stakes or metal staples.

**Figure 1. Typical Erosion Control Fabric Type and Placement Along Streambank with Live Staking Placement.**

NOTES:

1. STAKE TO HAVE TAPERED POINT 18" – 1" X 1" OAK OR EQUIVALENT. TAPERED 24' STAKES SHOULD BE USED IN HIGH SHEAR STRESS LOCATIONS (TO BE DETERMINED BY SITE ENGINEER).
2. EROSION CONTROL MATTING TO BE INSTALLED ACCORDING TO MANUFACTURER'S SPECIFICATIONS FOR LENGTH OF DESIGN CHANNEL. MATTING IS TO BE GEOCOIR/DeKoWe 700g/m<sup>2</sup>. CONTRACTOR RESPONSIBLE FOR COORDINATING WITH MANUFACTURER.
3. BEGIN MATTING INSTALLATION AT DESIGN CHANNEL BOTTOM AND INSTALL ONE WIDTH OF MATTING (6.5' MIN) FOR LENGTH OF PROJECT.
4. BLACK WILLOW, DOGWOOD OR EQUIVALENT LIVE SPRIGS TO BE PLANTED AT 2' OC FOR LENGTH OF DESIGN CHANNEL. SPRIGS TO BE 2'-4' IN LENGTH, NO MORE THAN 2' IN DIAMETER.

**Figure 2. Typical Live Staking Placement Along Streambank.**
