Appendix E. Five Runs Creek Focal Area. Sites with blue headings are river corridor sites; sites with orange headings are unpaved road sites. Specific definitions and calculations described for calculating the river severity score are detailed in USFWS (2005a) and USFWS (2006); sediment Risk Index (SRI) are detailed in Witmer (2009).

Appendix F. Pond Creek Watershed Focal Area. Sites with blue headings are river corridor sites; sites with orange headings are unpaved road sites. Specific definitions and calculations described for calculating the river severity score are detailed in USFWS (2005a) and USFWS (2006); sediment Risk Index (SRI) are detailed in Witmer (2009).

Notes: The overflow channel is lacking a riparian buffer leading to excessive runoff during flood events.  
 Some shoring structure has been used, but, ineffectively. Obvious aggradations are found downstream from this site.

Notes: Collapsed bridge causes a possible fish passage barrier and collects trash. Bridge blow out is likely due to high velocity flows during storm events from the widening and straightening of Pond Creek after it's confluence with Juniper Creek 0.10 miles upstream.
